PROJECT INTRODUCTION

Create a Database for Asnaf Zakat Management

*“ZENITH” is performing a project to automate the necessary operations of Asnaf Zakat Management System (AZMS). The offered system is named Asnaf Zakat Distribution Process. At present all the operations like zakat payers listing, rightful recipients ,fund management and distribution at AZMS is done by manually (**file-based system**). Zenith wishes to substitute **70%** of the manual filling process with a compact computerized database system that will receive records, develop distribution services, alleviate operational expenses as well as time and enhance recipient allowances. The team has estimated **\$50,000** for developing this project and it will take almost six months to establish. The project team “ZENITH” is supervised by Project Manager Mr. **Nasik Sami** from **B-Tech Computers Sdn Bhd**. Team Zenith is consisted with a project manager, one system analyst, one database administrator and one programmer. B-Tech Computers is integrated with such number of teams like Zenith and has been in system development project for the past one era. That is why our team is so reliable to all.*
